

	ENVIRONMENTAL POLICY	OLY-POL-036-E-A
Date: 09/07/2018	INTEGRATED MANAGEMENT SYSTEM	Page 1 from 1

In Olympia Odos SA we believe that environmentally sustainable roads represent an investment in the long-term prosperity of both planet and society.

In a time of growing environmental concerns with sustainability being a very important aspect of all current activities, protecting the environment is a collective 'duty'. Any large scale project like Olympia Odos motorway entails potential impacts to the natural environment which need to be considered and minimized. To that end, the respect and protection of the environment is an integral part of the operation and maintenance of the motorway.

The direct and indirect environmental impacts are defined, the activities that cause them targeted and the legislation governing them identified. The significance of these environmental aspects is assessed and operational control measures and targets for improvement are set.

We are committed in pursuing an environmental management of the motorway that fully respects the environmental legislation, meets the contractual provisions, the environmental licensing and that among other, aims at the:

- Minimization of waste through recycling.*
- Minimization of traffic noise through an integrated monitoring program*
- Protection of the archeological / cultural heritage.*
- Rehabilitation and preservation of vegetated areas and landscape impacted by the operation and heavy maintenance based on approved environmental studies.*
- Rational Management of resources like energy and water.*
- Prevention of air pollution by monitoring air quality at the project's surrounding areas*
- Environmental awareness raising amongst the stakeholders, contractors and customers*

Overall, Olympia Odos is an important infrastructure development which has social, financial and ultimately environmental benefits. The organized approach that has been adopted towards the protection of the environment ensures that the operation and maintenance of the motorway will have the least possible environmental impacts and the highest possible environmental and social benefits.
